Analytical report

AR-26-TH-013556-01-PTH04

**Sample Code**

296-2026-00013480

¹ Sample name	21/05 005-10530-0005269847
Packaging	Plastic cup
Product	Honey
Sampler	Client
Number sample tubes	1
Type of seal	Without seal
Amount	approx. 100 g
Reception temperature	room temperature
Reception date time	10.08.2026
Start / End of analysis	10.08.2026 / 17.08.2026

Test results**Sensory analysis**

THH25	Sensory Analysis of Honey (#)
Method	ICS SOP 520-02 (2024-01)

sensory indication**Color:** very light**Consistency:** partly crystalline, two layers**Odor:** not typical for honey**Taste:** sweet, no specific floral aroma, slightly metallic, not typical for honey

¹: This information was provided by the customer. Data provided by the customer may have an impact on the validity of the test results and the result assessment.

The analysis results and evaluation refer exclusively to the submitted samples and the scope of investigation. The measurement uncertainty does not include possible variation by sampling, if not stated otherwise.

The norm "General requirements for the competence of testing and calibration laboratories (DIN EN ISO/IEC 17025:2018, chapter 7.8.6) requires to state the decision rule for the consideration of the expanded measurement uncertainty in the conformity assessment analysis results obtained for the tested samples. Eurofins Food Integrity Control Services GmbH considers the expanded measurement uncertainty in case the analysis results exceed a legal limit or specification value. In case the analysis results do not exceed a legal limit or specification value, the expanded measurement uncertainty is not considered. Please contact us, if you have particular requirements differing from this standard procedure in order to set up an individual procedure according to your specific needs.

Assessment

The organoleptic properties of the above-mentioned sample are atypical for natural Honey. Therefore, the sample does not correspond to the legal regulation (Honey Directive 2001/110/EC; Article 2 in connection with Annex I and relevant literature).

Based on the current scientific knowledge, the analyzed pollen spectrum indicates "China" as regional origin (Honey Directive 2001/110/EC; Article 2 in connection with Annex I and relevant literature).

The analyzed yeast content is increased and can give a hint towards a fermentation or a stopped fermentation. However, the organoleptic properties do not provide an additional hint towards such fermentation).
