Conclusion: Botanical origin, HoneyDirective., Art 2	-
Conclusion: Geographical origin	China
Odour (ASU L 00.90-6, 2015-06, mod.^^^)	nicht honigtypisch/not honey-specific
Flavour (ASU L 00.90-6, 2015-06, mod.^^^)	nicht honigtypisch/not honey-specific
Colour (ASU L 00.90-6, 2015-06, mod.^^^)	honigtypisch/honey-specific
Consistency (ASU L 00.90-6, 2015-06, mod.^^^)	flüssig/liquid

Accredited method

u.r. = underrepresented; ü.r. = overrepresented; k = counted without pollen from nectarless plants (P)

*HD = Honeydew; **Starchgrains in % per 300 pollen- and starchgrains counted

^Weighing, ^^Adjustment in volume and temperature, ^^^Matrix: only Honey

***According to the Directive 2001/110/EC, as of 14 June 2026, also honey, which have been obtained by removing foreign inorganic or organic matter in such a way as to result in the significant removal of pollen (filtered) is classified as baker's honey

The expanded relative measurement uncertainty is 5 % (electr. conductivity) (coverage factor $k=2.58$; confidence interval 99 %) without taking the sampling into account.

Conclusion:

A declaration of the geographical origin China is consistent with the above determined pollen spectrum given current scientific research.

Odour and taste are not in accordance with the pollen spectrum. Some more tests should be done.
